1.WAPP to Calculate factorial using for loop.

```
num = int(input("Enter a number: "))
factorial = 1
for i in range(1, num + 1):
   factorial = factorial * i
print(f"The factorial is {factorial}")
```

2.WAPP to Print multiplication table in reverse order.

```
num = 5
for i in range(10, 0, -1):
   print(f"{num} x {i} = {num * i}")
```

3.WAPP to Input a number and count total digits using loop.

```
input = int(input("Enter any number: "))
num = abs(input)
count = 0
if num == 0:
   count = 1
else:
   while num > 0:
      count += 1
      num //= 10
print(f"Total digits: {count}")
```

4.WAPP to Find sum of digits of a number.

```
num = int(input("Enter any number: "))
total_sum = sum(int(digit) for digit in str(num))
print("Sum of digits:", total_sum)
```

5.WAPP to Reverse a number using loop.

```
num = int(input("Enter a number: "))
reverse = 0
while num > 0:
   digit = num % 10
   reverse = (reverse * 10) + digit
   num = num // 10
print("Reversed Number:", reverse)
```

8.WAPP to Check whether a number is perfect or not.

```
n = int(input("Enter a number: "))
s = 0
for i in range(1, n):
   if n % i == 0:
    s += i
if s == n:
   print("Perfect Number")
else:
   print("Not Perfect Number")
```

9.
