

1.WAPP to input 3 numbers and print the largest number using if-else.

```
num1 = int(input("Enter first number: "))
num2 = int(input("Enter second number: "))
num3 = int(input("Enter third number: "))
if (num1 >= num2) and (num1 >= num3):
    largest = num1
elif (num2 >= num1) and (num2 >= num3):
    largest = num2
else:
    largest = num3
print("The largest number is:", largest)
```

2.WAPP to check whether a given year is a leap year or not.

```
year = int(input("Enter a year: "))
if (year % 400 == 0) or (year % 4 == 0 and year % 100 != 0):
    print("It is a leap year.")
else:
    print("It is not a leap year.")
```

3.WAPP to calculate electricity bill based on units.

```
units = int(input("Enter the number of units consumed: "))
bamount = 0
if units <= 100:
    bamount = units * 5
elif units <= 200:
    bamount = (100 * 5) + ((units - 100) * 7)
else:
    bamount = (100 * 5) + (100 * 7) + ((units - 200) * 10)
gamount = bamount * 0.18
total = bamount + gamount
print(f"Total Bill Amount: ₹{total:.2f}")
```

4.WAPP to Input marks of 5 subjects and calculate percentage.

```
sub1 = int(input("Enter marks for Subject 1: "))
sub2 = int(input("Enter marks for Subject 2: "))
sub3 = int(input("Enter marks for Subject 3: "))
sub4 = int(input("Enter marks for Subject 4: "))
sub5 = int(input("Enter marks for Subject 5: "))
total = sub1+sub2+sub3+sub4+sub5
percentage = (total/500)*100
print(f"Percentage: {percentage}%")
if percentage >= 90:
    print("Grade: A Grade")
    print("Status: Distinction")
elif percentage >= 75:
    print("Grade: B Grade")
    print("Status: Pass")
elif percentage >= 50:
    print("Grade: C Grade")
    print("Status: Pass")
else:
    print("Grade: Fail")
    print("Status: Fail")
```

6.WAPP to perform Login Authentication System.

```
username = input("Enter username: ")
password = input("Enter password: ")
if username == "admin":
    if password == "1234":
        print("Login successful!")
    else:
        print("Login failed!")
else:
    print("Login failed!")
```

8.WAPP to Employee Salary Bonus System.

```
salary = float(input("Enter base salary: "))
yearsofexperience = float(input("Enter years of experience: "))
performance_rating = input("Enter performance rating (A, B, or other): ").upper()
if yearsofexperience > 5:
    bpercentage = 0.20
else:
    bpercentage = 0.00
if performance_rating == 'A':
    bpercentage += 0.10
elif performance_rating == 'B':
    bpercentage += 0.05
bamount = salary * bpercentage
final_salary = salary + bamount
print(f"Final Salary: ${final_salary:.2f}")
```

9.WAPP to Create a shopping bill program.

```
bill_amount = int(input("Enter amount: "))
is_vip = True
discount_percentage = 0
if bill_amount > 5000:
    discount_percentage = 20
elif bill_amount > 2000:
    discount_percentage = 10
if is_vip == True:
    discount_percentage = discount_percentage + 5
discount_money = (bill_amount * discount_percentage) / 100
price_after_discount = bill_amount - discount_money
gst_money = (price_after_discount * 18) / 100
final_bill = price_after_discount + gst_money
print("Final Money to Pay: ₹", final_bill)
```

10.WAPP to Online Voting System.

```
age = int(input("Enter your age: "))
citizenship = input("Are you an Indian citizen? (yes/no): ")
criminal_record = input("Do you have a criminal record? (yes/no): ")
if age >= 18 and citizenship == "yes" and criminal_record == "no":
    print("Result: You are ELIGIBLE to vote.")
else:
    print("Result: You are NOT ELIGIBLE to vote.")
```

11.WAPP to perform Smart Traffic Signal System.

```
speed = int(input("Enter vehicle speed: "))
if speed < 40:
    print("Status: Safe")
elif 40 <= speed <= 80:
    print("Status: Normal")
elif 81 <= speed <= 120:
    print("Status: Warning")
else:
    print("Status:")
```

12.WAPP to perform Income Tax Calculator.

```
income = int(input("Enter your annual income: "))
if income <= 250000:
    tax = 0
elif income <= 500000:
    tax = (income - 250000) * 0.05
elif income <= 1000000:
    tax = (250000 * 0.05) + (income - 500000) * 0.20
else:
    tax = (250000 * 0.05) + (500000 * 0.20) + (income - 1000000) * 0.30
cess = tax * 0.04
total = tax + cess
print("Tax amount:", tax)
print("Cess (4%):", cess)
print("Total Tax:", total)
```

13.WAPP to perform Railway Ticket Booking.

```
age = int(input("Enter age: "))
gender = input("Enter gender:")
ticket_class = "AC"
fare = 1000
if age >= 60:
    fare = fare - (fare * 0.20)
elif gender == "female":
    fare = fare - (fare * 0.10)
if ticket_class == "AC":
    fare = fare + 500
print("Final Fare:", fare)
```

14.WAPP to perform Student Result Management System.

```
c_marks = int(input("Enter marks for C: "))
java_marks = int(input("Enter marks for Java: "))
dbms_marks = int(input("Enter marks for DBMS: "))
html_marks = int(input("Enter marks for HTML: "))
react_marks = int(input("Enter marks for React: "))
if c_marks < 35 or java_marks < 35 or dbms_marks < 35 or html_marks < 35 or react_marks < 35:
    print("\nResult: Fail")
else:
    total = c_marks + java_marks + dbms_marks + html_marks + react_marks
    percentage = total / 5
    print(f"\nPercentage: {percentage}%")
    if percentage >= 90:
        print("Grade: A+")
        print("Status: Topper")
    else:
        print("Status: Regular Pass")
```

```
if percentage >= 80:
    print("Grade: A")
elif percentage >= 70:
    print("Grade: B")
elif percentage >= 60:
    print("Grade: C")
else:
    print("Grade: D")
```

15.WAPP to perform Bank Loan Eligibility System.

```
salary = int(input("Enter salary: "))
cibil = int(input("Enter CIBIL score: "))
existing_loan = float(input("Enter existing loan amount: "))
age = int(input("Enter age: "))
if salary>25000 and cibil>750 and existing_loan<500000 and 21<= age<=60:
    if salary>100000 and cibil>800:
        print("\nStatus: Premium Customer Loan Offer")
    else:
        print("\nStatus: Eligible")
else:
    print("\nStatus: Not Eligible")
```
